WHY ALL THESE FILES

TO JUST CREATE A PACKAGE

Building a package

 main.py

```
def main():
    return "Hello"
```

 setup.py

```
from setuptools import setup

setup(
    name = "python-floripa",
    py_modules = ["python-floripa"]
)
```

```
william in /opt/python-floripa ((HEAD))
(python-floripa) >> python setup.py bdist_wheel
running bdist_wheel
running build
running build_py
...
running install_egg_info
running egg_info
creating python_floripa.egg-info
...
Copying python_floripa.egg-info to build/bdist.linux-x86_64/wheel/python_floripa-0.0.0-
py3.7.egg-info
running install_scripts
creating build/bdist.linux-x86_64/wheel/python_floripa-0.0.0.dist-info/WHEEL
creating 'dist/python_floripa-0.0.0-py3-none-any.whl' and adding 'build/bdist.linux-
x86_64/wheel' to it
adding 'python_floripa-0.0.0.dist-info/METADATA'
adding 'python_floripa-0.0.0.dist-info/WHEEL'
adding 'python_floripa-0.0.0.dist-info/top_level.txt'
adding 'python_floripa-0.0.0.dist-info/RECORD'
removing build/bdist.linux-x86_64/wheel
```

```
(python-floripa) >> tree
```

```
.
```

- └── build
- └── bdist.linux-x86_64
- └── dist
- └── python_floripa-0.0.0-py3-none-any.whl
- └── main.py
- └── python_floripa.egg-info
- ├── dependency_links.txt
- ├── PKG-INFO
- └── SOURCES.txt
- └── top_level.txt
- └── setup.py

4 directories, 7 files

```
(python-floripa) >> pip install dist/python_floripa-0.0.0-py3-none-any.whl
```

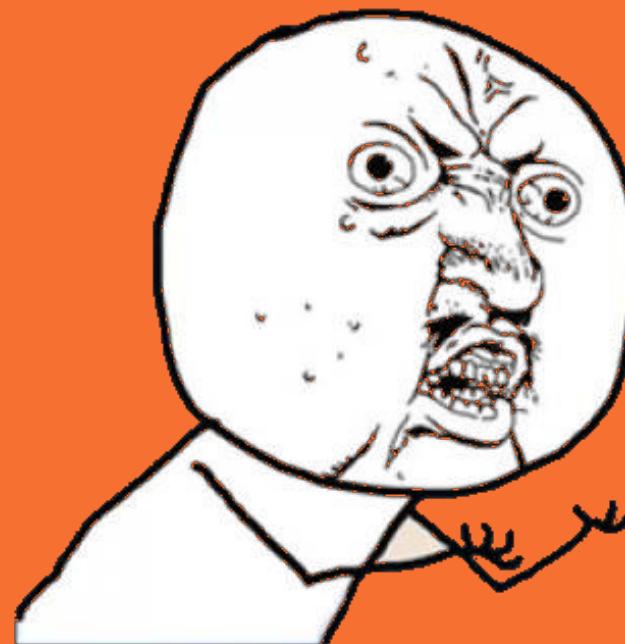

Processing ./dist/python_floripa-0.0.0-py3-none-any.whl
Installing collected packages: python-floripa
Successfully installed python-floripa-0.0.0

 williamjamir Update CONTRIBUTING file

..

 docs	Update CONTRIBUTING file
 src/{{cookiecutter.package_name}}	Add end of lines on files
 test	Add end of lines on files

 appveyor.yml	Add end of lines on files
 setup.cfg	Add end of lines on files
 setup.py	Update CONTRIBUTING file
 tox.ini	Use extras instead of deps on tox.ini

IF IT WAS THAT EASY

WHY SO MANY FILES??

The anatomy of a python repository

~~For humans~~

~~From zero to here~~

How the cool kids are doing it

Package

“Packaging is all about target environment and deployment experience”

<https://packaging.python.org/>

This presentation focus on:

Packaging Python libraries and tools

A screenshot of a file explorer window titled "pytest-dev / pytest". The tree view shows the following directory structure:

- .github
- bench
- changelog
- doc/en
- extra
- scripts
- src
- testing
 - .coveragerc
 - .gitattributes
 - .gitignore
 - .pre-commit-config.yaml
 - .travis.yml
 - AUTHORS
 - CHANGELOG.rst
 - CITATION
 - CONTRIBUTING.rst
 - HOWTORELEASE.rst
 - LICENSE
 - README.rst
 - azure-pipelines.yml
 - pyproject.toml
 - setup.cfg
 - setup.py
 - tox.ini

- pyproject.toml
- setup.cfg
- setup.py
- tox.ini

Packaging

- ☰ pyproject.toml
- ☰ setup.cfg
- ✚ setup.py
- 📄 MANIFEST.in

Package

Configs

```
import setuptools

with open("README.md", "r") as fh:
    long_description = fh.read()

setuptools.setup(
    name="python-floripa",
    version="0.0.1",
    author="", author_email="",
    description="",
    long_description=long_description,
    packages=setuptools.find_packages(),
    install_requires=["attrs >= 18.2.0"],
    python_requires=">=3.6",
)
```

Package

Configs

!! setup.cfg has also configs from others projects

```
[metadata]
name = my_package
version = attr: src.VERSION
description = A small example package
long_description = file: README.md
license = BSD 3-Clause License
classifiers =
    Programming Language :: Python :: 3

[options]
packages = find:
install_requires =
    attrs >= "18.2.0"
python_requires = 3.5
```

Package Configs

- Setuptools accept all data files and directories matched by MANIFEST.in
- Setuptools-scm puts everything from GIT into the package

```
include LICENSE *.rst *.toml *.yml *.yaml
graft .github

# Stubs
include src/attr/py.typed
recursive-include src *.pyi

# Tests
include tox.ini .coveragerc conftest.py
recursive-include tests *.py

# Just to keep check-manifest happy; on releases those files are gone.
# Last rule wins!
exclude changelog.d/*.rst
include changelog.d/towncrier_template.rst
```

hynek Just put everything into the sdist so everyone is happy

Handling dependencies

tools and libraries
install_requires

applications
requirements.txt

- Automatically analyzed by pip during an install
- “Abstract”: not associated with any particular index,
- List of pip install arguments placed into a file
- “Concrete”: associated with a particular index or directory of packages.

Package

Configs

 pyproject.toml

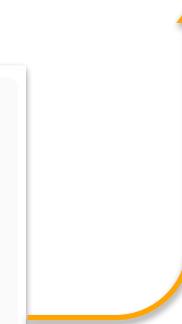

Poetry

```
[build-system]
requires = ["setuptools>=40.6.0", "wheel"]
build-backend = "setuptools.build_meta"
```

```
[tool.black]
line-length = 79
```

```
[tool.towncrier]
```
